## **DETAILED ACTION**

Page 2

1. This communication is responsive to the amendment filed on June 02, 2005. Claims 1, 5, and 7-8 were amended. Claims 6-11 are newly added. Claims 6-11 were not originally rejected in the last Office Action mailed on March 2, 2005 because the second pages of claims (namely claims 6-11) was not scanned in. Claims 1-11 are presented for examination.

## Claim Rejections - 35 USC §102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 3. Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Murakawa U.S. Patent Application Publication No. U.S. 2001/0020273.
- 4. As to claim 1, Murakawa teaches a method of sending a packet from a first IPSec client to a second IPSec client, comprising the steps of:

receiving at a non-proprietary format tunneling protocol server from the first IPSec client an IPSec packet mapped in the non-proprietary tunneling format (see Fig. 1, Page 3, paragraph [0071]);

creating a non-proprietary format tunneling protocol tunnel to the second IPSec

Application/Control Number: 10/045,786

Art Unit: 2155

client through the non-proprietary format tunneling protocol server (see Fig. 1, Page 3, paragraph [0072]);

establishing a security association between the first and second IPSec clients via the non-proprietary format tunneling protocol server (see Fig. 1, Page 3, paragraph [0072]);

transmitting the packet through the non-proprietary format tunneling protocol tunnel to the second IPSec client whereby the packet remains unaffected by any address translation or firewall traversal that may occur during transmission (see Fig. 1, Page 3, paragraph [0071]-[0075]).

- 5. As to claim 2, Murakawa teaches the method according to claim 1 wherein the non-proprietary tunneling protocol comprises a Layer-2 Tunneling Protocol (L2TP) protocol (see Fig. 1, Page 3, paragraph [0066]-[0067]).
- 6. As to claim 3, Murakawa teaches the method according to claim 2 wherein the receiving step includes the steps of:

opening an LT2P tunnel between the first IP client and the server; and communicating an IPSec packet wrapped in an L2TP format to the server (see Fig. 1, Page 3, paragraph [0071]-[0075]).

- 7. As to claim 4, Murakawa teaches the method according to claim 2 wherein the receiving step includes the step of routing an IPSec packet wrapped in an L2TP format to the server via a public address (see Fig. 1, Page 3, paragraph [0071]-[0075]).
- 8. The method according of claim 4 wherein the public address is supplied from the server to the first IPSec client (see Fig. 1, paragraph [0068]-[0075]).

Application/Control Number: 10/045,786

Art Unit: 2155

9. As to claim 6, Murakawa teaches the method according to claim 5 wherein the

Page 4

step of creating a non-proprietary format tunneling protocol to the second IP sec client

includes the step of providing to the second client a public address identifying the server

(see Fig. 1, paragraph [0068]-[0075]).

10. As to claims 7-11, they contain similar limitations as in claims 1-6, therefore they

are rejected under the same rationale.

**Contact Information** 

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Shawki S Ismail whose telephone number is 571-272-

3985. The examiner can normally be reached on M-F 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Saleh Najjar can be reached on 571-272-4006. The fax phone number for

the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
